

S3 buckets

Use to storing a data , connect any sql and other data bases

Simple storage services (store any files )

Bucket version (store all versions of particular objects )

I am getting error here (The specified method is not allowed against this resource. Use [Amazon Athena](#), [S3 Object Lambda](#), or client-side filtering to optimize querying your data in Amazon S3. [Learn more](#)) (real healthcaredata1.csv not open query ) (dono file open krk dekh lia nhi open hora sql editor mai )

Using another method to open query

Redo (bucket)

Athena mai open hora h but s3 bucket mai nhi

Amazon athena

Crawler allow data source and it pulls it in and infers data refer to data types

We dont use crawler thats why we have put columns names manually

Columns name no need to be exact as in csv

Alex mai error (not in mine that is error starting query )

To cater the messiness we need to create folder

Kaafi try k baad b metadata mai mai results and output not shown

Abey each query mai jake set krna pdd rha h by default not set

Aur metadata k ander unsaved folder apne aap bngya h aur bhot nested folder hora h

Both files

Alex mai query editor k neeche notebook editor b h aur notebook explorer b h

Workflows use to make pipelines with data(advance)

For advances and queries use rds instead of athena or other type of sql server or make other database

Aws glue data brew and glue

Building pipelines and creating etl process

Visualisations

Glue is tough as compared to glue brew

Aws glue se hame table k columns names write krne ki no need so thats we did in athena

Recursive off kro when u have one files in s3 (aws etl jobs mai )

Visualaeditor mai

29:23 youtube

Mai jo individual files unko selec krn pe error aara but if select folder it will not give error

Solution pehle bothdata folder mai jao fir select kro individual data ko

41:20 isme alex ka error aara h but mai re mai nhi h

Quick sight

It is aws visualisation tool

Spice (super fast parallel in memory calculation engine )

Sql file not available alex WALA

FINALLY PLAYLIST COMPLETED
